

Ideation phase

Empathy and discover

Date	28 June 2026
Project Name	A Comprehensive measure of Human Well being
Maximum Marks	4 Marks

Empathy canvas

An Empathy Map is a collaborative tool used to gain a deeper understanding of a target user. It captures what the user thinks, feels, hears, sees, says, and does — along with their key pain points and desired gains. For the Human Development Index (HDI) Predictor tool, the empathy map is built around a policy analyst who works with development data to assess and classify countries based on their human development levels.
